

DRIVING ECONOMIC GROWTH IN THE 2020s AND BEYOND

A Special Issue of *The American Economist*

Call for Papers

Guest Editors:

William A. Barnett, University of Kansas
Bruno S. Sergi, Harvard University
Stephen Turnovsky, University of Washington

The American Economist invites submissions for a special issue entitled “Driving Economic Growth in the 2020s and Beyond.”

This special issue aims to identify the key drivers of current economic growth and the sources of long-term, sustainable growth in the twenty-first century. The editors seek to publish peer-reviewed high quality original papers, both theoretical and empirical, exploring the multi-dimensional dynamics of modern economic growth, both regional and global. As growth dynamics have become more complex, the editors invite papers that question whether standard growth accounting measures and causal factors such as capital, labor, and technology are adequate to capture and model the intricacies of future economic growth. This special issue will also focus on the extent to which key contextual factors, such as profound national innovation projects and thoughtful institutional reforms, can generate sustainable growth dynamics over time, and the impact of economic growth on income and wealth distribution.

All papers must adhere to the journal’s style guidelines and manuscript requirements, which are available through the journal’s homepage: <http://journals.sagepub.com/home/aex>

Papers must be submitted online via <https://mc.manuscriptcentral.com/aex> by December 31 2018.

For more information or questions about this special issue of *The American Economist*, please contact Bruno S. Sergi at: bsergi@fas.harvard.edu
